

MultiPlayer Installation

Web Server

- 1) Install a web server with PHP module
- 2) Install MySQL on the web server
- 3) Create a new database and import *bf2statistics.sql*
- 4) Create new *ASP* (uppercase) directory on the web server
- 5) Copy the content of the *bf2statistics ASP* directory into your *ASP* directory
- 6) Edit *config.php*
- 7) Edit your server hosts file located in:
%Windowsdir% \systems32\drivers\etc\hosts.
Add the following line to the file:
yourIP bf2web.gamespy.com

BF2 Client & Server

- 1) If using SF mod, skip to step 3
- 2) Copy the content of *bf2statistics bf2/python* directory into your *python* Directory (some files will asked to be overwritten)
- 3) Copy the content of *bf2statistics xpack/python* directory into your *python_xpack* directory (some files will asked to be overwritten)
- 4) Edit the appropriate *snapshot.py* so it points to the *ASP* directory on the web server
- 5) Edit the Prefix on *snapshot.py*.

SINGLE PLAYER INSTALLATION

NOTE:SERVER MUST BE RUN IN DEDICATED MODE!

- 1) Follow all of the instructions above**
- 2) Edit *make_pid.php* and run to generate the new file**
- 3) Edit *playermanager.py* so it point to the new file**

RUNNING A SERVER

Multiplayer:

- 1) Make sure the following parameters are used:
+*dedicated 1 +ranked 1***

Single Player:

- 1) Use the above parameters PLUS:
+*ai 1 +gamemode sp1***

ENJOY YOUR BF2STATISTICS ENABLED SERVER!
