<u>About BuzzyBots 2.3d</u>:

BuzzyBots 2.3d is an "*unofficial*" release.

The author of this file, and packager of the **BuzzyBots23d.ZIP** file was not part of the original BuzzyBots development team – just a fan who wanted to play it under Steam, setup a dedicated BuzzyBots server, and make it easier for other fans to play BuzzyBots under Steam.

This file was packaged on November 30th, 2005.
This file was packaged by weasel@ladt.us – not any member of original BuzzyBots development team.

My apologies if anyone from the original team takes offense from this "release". However, the "official" BuzzyBots web-site (http://www.BuzzyBots.dk) does not appear to be on-line anymore.

BuzzyBots 2.3d, *is* essentially:

- BuzzyBots version 2.3, extracted from the previous "official" release file (BuzzyBots_v23.exe).
- Included the updated (by "killerwombat666"?) **BuzzyBots\gfx\shell\kb_act.lst** file to allow Steam GUI to properly parse configuration settings. The old pre-Steam version of this file didn't parse correctly under Steam and caused keyboard mapping settings to not be configurable under the GUI.
- Included additional files in the **BuzzyBots\Resource** folder (created by "killerwombat666") to provide information that the Steam GUI requires to provide a proper "splash" screen and start-up options.
- Replaced the reference to http://www.BuzzyBots.dk (which no longer works) in the **liblist.gam** file to instead refer to the ModDB page for BuzzyBots (http://mods.moddb.com/271).
- Re-zipped and distributed as a .ZIP file instead of a .EXE file. This was done in part to allow easier server setups, but also because these days people are wary about downloading and running executable archives off the Internet.

Installation Instructions:

This version of BuzzyBots is intended to operate with the Valve Software "Steam" software launching system. Obviously, you must already have Steam installed, with Half-Life already downloaded and executed at least once to ensure that the proper file structure already exists. Beyond that, BuzzyBots is very simple to install. The basic process is the following:

- Unzip the contents of the **BuzzyBots23d.ZIP** file to a temporary location. If you're reading this file, you may have already done that.
- Find your Half-Life folder within your **SteamApps** folder. Usually that location is something like **C:\Program Files\Steam\SteamApps**_e-mail-address@domain.com_**\Half-Life**. – where _e-mail-address@domain.com_ would be the e-mail address that is used as your Steam logon.
- Copy the **BuzzyBots** folder extracted from the BuzzyBots23d.ZIP file to that folder.
- The before and after, should look something like this:
